

FACE PIGMENT

Mixture intended for use in tattooing or permanent makeup

General information:

- Mixture intended exclusively for professional use by permanent makeup artists.
- Use within 12 months after opening.
- Store between +5°C and +30°C.
- Do not expose to direct sunlight.

Instructions for use:

- Shake well for at least 30 seconds before use!
- Dispense into a sterile, single-use pigment cup or ring!
- Do not touch the tube with the rubber gloves used during the permanent makeup procedure!
- If additional pigment is required during the procedure, handle the bottle only with clean, disinfected hands!
- A patch test on the client is required 48 hours before the permanent makeup procedure!

Appropriate precautions:

- Keep out of reach of children!
- Due to the nature of use, contact of the pigment with the eyes and skin may occur.

Excess pigment can be easily removed from the skin using a gentle cleansing milk, cleansing foam or green soap. At the end of the working process, gently remove excess pigment from the eyes with damp cotton wool. After completing the procedure, wiping the treated area with a skin disinfectant is a professional requirement.

Protective equipment during the procedure:

1. The professional must wear disposable rubber gloves, a protective mask covering the mouth and nose (e.g. a disposable surgical mask), and protective clothing or an apron.
2. For the client, disposable protective covering, a headband and a hairnet must be provided.

No hazardous reactions are known under normal conditions of use.

Before using the mixture for tattooing purposes, the person using the mixture must inform the person undergoing the procedure about the information stated on the packaging and in the instructions for use (i.e. the permanent makeup artist must inform every client, before the procedure, of all information listed on the label and in the instructions for use).
